

FREE INEVITRADE Crypto Trading Guide

First, thank you for giving us a chance to prove to you how you do not have to be a genius or rich to start trading crypto. There is so much misinformation out there it is nice to be able to put some of those doubts out of people's heads.

Now, to be able to trade crypto, it helps to understand the fundamentals about them. I'm going to break down to you some important information about cryptos and some other knowledge/resources from my 5 years of full-time trading and investing experience that will help you create a foundation for success.

What you will learn:

1.) Best Exchanges For Trading & Investing In Crypto + Signup Bonus Links

From using our code you can get huge savings on fees and free crypto deposited into your account just by going through us. I'll show you my favorite exchanges to use and why.

2.) What Cryptos Are & Why We Use Them

A clear-cut explanation of what cryptos are and how they actually mesh with the developing technological landscape we see today (fundamental information)

3.) Trading Psychology

The psychological mindset you need to adopt to put yourself ahead of the competition in trading (most important)

4.) Best Altcoins for Swing trading & My Favorite Crypto Research Resources

The coins I chose to trade on a regular basis with my team that have good liquidity & price action, as well as a list of the sites I use to conduct my research. (this is not available to the public... you welcome haha)

1. Best Exchanges For Trading & Investing In Crypto + FREE Sign-up Bonus

A typical question I get is what exchange I use to conduct my trading and investing, so i've laid out all of the ones that I use, and why. Because each exchange has their pros and cons, and it takes some time to figure it out, so I figured I'd save you the time and tell you.

I have added my custom link to join, so that if you sign up you get benefits, (i'll explain) and I get referral credits for referring to you, it's a beautiful symbiotic relationship! Lol. Here is the breakdown. I have exchanges for trading, Investing, & safe Safe storage. Here is the best for each and what you'll get by signing up through our referral link.

Best Active Trading Exchanges:

- #1 Kucoin: <https://www.kucoin.com/ucenter/signup?rcode=rJSVSJ5>

Use Code: rJSVSJ5

- **Reason:** It allows U.S residents to trade 5x leverage, and take short positions which is critical to active trading.
 - It is extremely secure, great 2 step verification, decent UI.
 - **Your Bonus:** You'll save 20% on fees for the first 10 days and will be given \$5 worth of free crypto upon signing up. So when you deposit money, you'll pay way less in fees, especially if it's a fairly large amount on the initial deposit.
-
- #2 Binance.US: <https://accounts.binance.us/en/register?ref=52582019>
 - **Reason:** It has amazing coin selection and is one of the largest most reliable exchanges with an amazing UI. Only negative is that U.S residents cannot short.
 - **Your Bonus:** You'll save 20% on fees permanently.

Best Investing Exchanges:

- #3 Coinbase: <https://www.coinbase.com/join/percocy>
 - **Reason:** It is by far the most legit crypto exchange with the best UI and allows us to have instant deposits from a bank or coinbase up to \$35,000

2. What Cryptos Are & Why We Use Them

Cryptocurrency is essentially the first step in everyone being semi liberated by governments controlling how our money works, what the worth is and how we can use it. Imagine if our currency wasn't controlled by government and corporate agencies? What if there were no limits on the amount you can transfer to another person,

no interference from authorities when those limits are exceeded, and perhaps best of all, no physical cash? It all sounds pretty futuristic.

Thanks to a few industrious entrepreneurs, the monetary future has arrived. Crypto is a virtual currency that was created and designed to give total financial autonomy to its users. There's no censorship, it's protected from inflation, and it's cheaper than other payment systems — just you and your coins, however you choose to use them. The use of cryptocurrencies liberates individuals to be able to manage their finances the way they see fit, without any prying eyes.

No government can control it, it is safe from inflation, safe from authorities, and it gives complete autonomy to its users.

The whole world was gradually migrating to the digital sphere, but conventional money was attached to the ground, to vaults owned or controlled by governments. After all, a currency is useless unless it is scarce and its replication is carefully controlled.

Bitcoin sort of started the entire crypto currency scene. Bitcoin removed this central point of failure, enabling miners themselves constantly to validate the transaction record. Each user downloads the full ledger of all existing Bitcoins so that each could be checked for its title and not used more than once at the same time. With his system, every coin had an owner, and the system could not be gamed.

Further, Nakamoto built in a system of mining that attempts to replicate the experience of the gold standard. The math equations CPU power must solve get harder over time. The early creators had it easy, just like the early miners of gold could pan it out of the river, though later they had to dig into the mountain. Nakamoto put a limit on the number of coins that can be mined (21 million by 2140). (A new coin is currently mined every 20 seconds or so, and a transaction occurs every second.)

He made his code completely open-source and available to all so that it could be trusted. And the payment system used the most advanced form of encryption, with public keys visible to all and a scrambling system that makes its connection to the private key impossible to discover. No one would be in charge of the system; everyone would be in charge of the system. There would be no need for an Audit Bitcoin movement. Trust, anonymity, speed, strict property rights, and the possibility that applications could be built on top of the infrastructure made it perfect.

Bitcoin went live on November 1, 2008.

To really appreciate why this matter, consider the times. The entire political and financial establishment was in full-scale panic meltdown. Soon after, smaller altcoins are now coming

out, solving new problems and slowly but surely transitioning the world over to the decentralized, digital landscape, which I believe is where the future of the human races financial systems will go. This is where the trading opportunity started for us, not only as investors, but as traders.

We now have been able to find projects like this and use technical patterns to be able to find exact tops and bottoms of price movement, to generate trading profit off of these emerging coins.

3. Into to Trading Psychology

Most of the BIGGEST trading errors come from people starting their trading with no concept of trading psychology. The FIRST thing I talk about in the INEVITRADE Crypto Program is how you need to rewire your brain in order to be successful in trading.

The reason why 90% of traders fail is because they follow intuition that allows them to succeed in normal everyday life but will lead to their demise in trading.

Are you confused yet? Lol do not worry it's supposed to be confusing. This is good because it allows us to put ourselves ahead of all the people that fail to learn this, and think they just need to find a magical trading pattern that is going to make you rich. This is not true and let me explain to you why.

To win in this game, you need to take all the preconceived notions you have embedded into your subconscious mind about life, and what makes sense to be successful, and do a complete brain dump. Everything you think you know about how you need to think or act in trading, mentally shred it, burn it, then bury the ashes.

Typically, in life if you are wrong, and as a result you lose money, it is viewed as negative behavior that needs to be corrected. Makes sense, right? Well, what if I told you that this is the most ass-backwards logic in the trading world that leads people to want to rip their hair out (especially normally successful people) and quit when they are learning how to trade? Lol it's the truth.

I can't get too deep into these concepts here, but I will tell you this. In professional trading, trades are viewed as quantifiable opportunity cost, where the outcome is relatively uncertain, but the risk is always certain. And statistically over time, based on data back testing (which I teach in the course) you will know how often you are right, wrong, flat, full profit or full loss. And that analysis is what you use to decipher whether your system is working.

You can be wrong 80% of the time, but if your back testing tells you that over 100 trades, you will make 3k more than you lost, you are a successful trader that loses money and is wrong 80% of the time.

And if you were to get the good old question "how is your trading going?" from your family & friends, and you were to respond, "I'm actually wrong and lose money about 80% of the time."

they would come in for a hug and tell you they are sorry to hear that. And there lies the largest issue with trading that most people have, and why most people fail. But that is just scratching the surface...

5.) Best Altcoins for Swing trading & My Favorite Crypto Research Resources

So, one of the most annoying questions I get is “where did you find this coin?” or “what made you look at this specific crypto?”.

Now there are a lot of answers for that, sometimes I’m looking at high volume cryptos from www.coinmarketcap.com or im surfing www.coindesk.com reading articles, or on www.coingecko.com finding trending coins and evaluating their whitepaper, reading about developers and cross checking on www.glassnodes.com. These are resources I use to compile, good volume, high potential coins, to then find swing trading opportunities on.

But since you're here, actually taking initiative, I want you to have access to this list so that even if you don't join our team, you can learn elsewhere or master it on your own and have a sick list of altcoins as trade vehicles.

Symbol	Last	Chg	Chg%
BTCUSD	57252.22	-864.48	-1.49%

UNIUSD	32.363	0.376	1.18%

Thank You!

Thank you for showing interest, and I hope at the very least this proved value to you regardless of your intentions. There are plenty of opportunities for everyone out there and my goal is obviously to make money selling what I've grinded for years to learn, but also to make the world a better place, for people that take action, and don't just let life and opportunities pass them by.

Goodluck to all of you and never hesitate to reach out to me or my team, I will leave my linktree below with a lot of good resources as well.
